EDUCATION

Foothill College
Associate's Degree – Computer Science
Relevant Coursework: Intro to Software Design, Computer Architecture, Data Structures and Algorithms, Discrete Math

EXPERIENCE

Software Engineer Intern – *Goldeye Capital* *January 2026 - April 2026*

- Secured multi-tenant data architecture and boosted system uptime by **30%** by transforming a legacy Go/PostgreSQL backend into a robust SaaS API (**~25 REST endpoints**) that enforces per-request tenant isolation and eliminates cross-tenant data-leaks.
- Designed a deal payout engine (Reg CF 1A/1B configs, period schedules, distribution status machine) covering **2 payout models** and **~10 domain entities**, unblocking automated investor distributions.
- Slashed client onboarding time by **50%** by launching a zero-code tenant theming system that allows instant provisioning of white-label portals without engineering intervention.
- Optimized engineering velocity and shrank **feature cycle time** by **~30%** by re-architecting **CI/CD** pipelines and establishing rigorous automated **lint/unit/integration tests** for a team of **3 engineers**.

Co-Founder and Software Engineer – *BravoBall* *July 2024 - December 2025*

- Launched BravoBall on iOS/Android, driving **8,000+** downloads and a **4.8-star rating**. Engineered a data-driven product roadmap leveraging a **400k+ personal brand** following, driving rapid user engagement.
- Migrated **5,000+** users and **1,000+** completed sessions, with zero downtime and **99.9%** data integrity by redesigning the PostgreSQL schema and executing a phased rollout across Render/ AWS S3 cloud infrastructure.
- Cut average release cycles from **~4 weeks** to **~2 weeks** by automating planning via Miro **MCP workflows**, while standardizing **LLM-powered** Cursor documentation for improved team velocity.
- Constructed API gateway using Cloudflare Workers for edge computing and proxy, decreasing backend load up to **20%**.
- Refined a personalized training algorithm handling **two-pass ranking** and **normalization**, resulting in **3,600+** successful sessions.
- Engineered an **AI-automated** bash script to execute **integration tests** across the codebase, reducing internal system errors **45%**.

Co-Founder and Software Engineer – *ConklinOfficial* *March 2024 - November 2025*

- Built a full-stack **KPI tracking** platform (TypeScript, Java) to analyze post performance for **400k+ personal brand** following, increasing data visibility and improving content-driven decision-making by **35%**.
- Engineered real-time update pipelines using WebSockets to stream new post data instantly, reducing data latency by **80%** and enabling faster content optimization.
- Leveraged Google Analytics **SEO audits** to increase organic traffic **30%** and improve conversion rates through experimentation.

Web Development Instructor – *Tech Tykes* *December 2024 - April 2025*

- Increased student understanding teaching **20+** kids programming basics and debugging using HTML, CSS, and JavaScript.
- Improved student project quality **40%** by simplifying complex engineering concepts through clear **technical explanations**.
- Enhanced curriculum effectiveness collaborated with team leads using Slack and Notion to refine lesson plans.

PROJECTS

Nowtify Github Repository

- Users get their Spotify songs from Spotify Web API, and a recommendation of songs is given based on their current mood.
- Engineered secure **authentication system** using OAuth 2.0 and JWT for RDS backend, reducing security vulnerabilities by **40%**.

CyberCheck Github Repository

- Engineered Next.js/ Node.js cybersecurity platform to analyze log files with GPT-3.5-turbo for AI-powered **anomaly detection**.
- Achieving **80%+** confidence scoring on threat identification and reducing manual log review time for SOC analysts.

SKILLS

Languages: Python, Dart, Java, Go, Javascript, Typescript, Swift, HTML, CSS
Developer Tools: AWS, PostgreSQL, Docker, GitHub, Heroku, Visual Studio, Postman, Cursor, Plane, Miro, Cloudflare, Figma
Frameworks / Libraries: Flask, React, Flutter Next.js, Node.js, Spring Boot, SQLAlchemy, FastAPI, scikit-learn
